PROJECTS

MusExplore

musexplore.com

- Collaborated with peers to develop a web-based application that allows the user to link their Spotify account, take a personality quiz, and receive personalized song recommendations consisting entirely of music from foreign countries.
- Utilized cosine similarity to match the user's preferences with Spotify's audio features and recommend 10 songs that match their taste.
- Integrated the frontend built with HTML and CSS with the backend developed using JavaScript.
